

Monty Python's Eric Idle Shares His Hilarious Pancreatic Cancer Journey

Now free of pancreatic cancer—and a former “Masked Singer” hedgehog!—Eric Idle launched the Bright Side Fund at Stand Up To Cancer.

September 28, 2022 By Laura Schmidt

Legendary comedian, actor, singer-songwriter and founder of the comedy troupe Monty Python, Eric Idle recently opened up about his experience with [pancreatic cancer](#) and how it led to the formation of the Bright Side Fund at [Stand Up To Cancer](#) to support pancreatic cancer research.

About three years ago, during a routine health checkup, Idle's doctor, David Kipper, PhD, also a friend of the actor's, suggested additional tests, just in case. One of those tests revealed a tumor on Idle's pancreas that, luckily, had yet to spread.

Idle recounts his journey in a delightful [Time magazine article](#) that's written from his sunny and humorous perspective (would you expect anything less from the man who sang “Always Look on the Bright Side of Life” while being crucified in the movie *Life of Brian*?).

“I want to encourage people in families at high risk of pancreatic cancer to explore the newer tests available for detecting the disease early,” writes [@EricIdle](#).

“Help me help others like me to survive” <https://t.co/RRrTFIEnP>
— TIME (@TIME) [September 26, 2022](#)

In the article, Idle recalls Kipper giving him the diagnosis: “Here's the good news, Eric, neither the

technician nor anyone here has ever seen this at this stage. It's unattached, no nodes, and we have a very good chance of whipping it out."

Very good news indeed—and rare too. In the United States, about 53,000 people are diagnosed with pancreatic cancer and about 43,000 die of the disease annually, according to the American Cancer Society. Despite the fact that pancreatic cancer accounts for only about 3% of all cancers in the United States, it is the fourth leading cause of death in both women and men. People with pancreatic cancer generally have no symptoms, making it difficult to detect at early stages.

As the [Cancer Health Basics on Pancreatic Cancer explains](#), the pancreas is an organ that sits behind the stomach and produces enzymes that are released into the intestines to help digest food. Cells within the pancreas—known as islets of Langerhans—produce the hormones insulin and glucagon, which control blood sugar levels.

Although Idle and his family were grateful to have caught the cancer early, they were still anxious. To ease their fears, they decided to refer to the diagnosis as "Kenny," which Idle considered "far less threatening."

Soon, Idle, under the pseudonym "Mr. Cheeky" to avoid tabloid gossip, found himself at Cedars-Sinai Medical Center in Los Angeles, where Kipper and his team performed a five-hour surgery to remove the entire tumor.

"He has cut it all out. It was not attached to anything, and my lymph nodes were clear. The cancer is gone," Idle wrote in the Time article. "They could find no further trace in my body. I had been a dead man walking. I am going to live."

Idle is aware that he is incredibly lucky to have a friend in Kipper, who insisted on additional tests in the first place. He recalls hugging his friend and telling him, "There's no doubt you just saved my life."

After his recovery, he was invited to join season 8 of the reality show competition The Masked Singer, and he accepted. "I did the Masked Singer because I wanted to see if I could still do it after I had survived Pancreatic Cancer," he tweeted September 21, adding "Now I'm starting the Bright Side Fund to raise money to help save others. I have partnered with Stand Up To Cancer."

**Funny, I just happened to catch that on the TV. On a
break from work. And I never watch prime time
television.**

I thought it was Elton John.

So happy for you and your family, Eric! [@TaniaIdle](#)

Today, Idle is ready to share his story with the world and encourage high-risk individuals to get tested for pancreatic cancer and explore newer tests available for early detection.

“Kipper said that if we had delayed by only two weeks, I would not even have seen the surgeon,” Idle wrote. “So please talk to your doctor to understand which screening tests may be right for you and tell your loved ones to do the same. Help me help others like me to survive. And, all together now: ‘Always look on the bright side of life....’”
