

Month 117 — Running on Pandemic Time

As we negotiate this pandemic, do your days seem to blend together and you lose track of time?

September 4, 2020 By [Daniel Zeller](#)

Is it just me, or is anyone else having pandemic days all blend together and you lose track of time? Late last night (technically very early this morning as I was tossing and turning in bed around 2 a.m.), I realized, “Crap! I didn’t even think about posting on my blog, let alone write anything!”

So here I am on my advertised posting day with three hours and one minute left to get this out on the 11th, and I pretty much have nothing. Well, that’s not entirely true...

I did come across this article on The “New” Prostate Cancer Infolink that talks about PSA doubling times with respect to prostate cancer progression in men with non-metastatic castration resistant prostate cancer.

[PSA doubling time and prognosis for men with nmCRPC](#)

Unfortunately, they weren’t able to access the full study report, and the summary that’s provided is pretty high-level, restating the obvious: Shorter PSADT is associated with shorter metastasis-free survival and shorter overall survival.

One of the things that I discovered working in a hospital is that I can sometimes access research reports like this via its computer network. I’ll see if I can access this report to learn more details about the study and, if I can, I’ll share anything I learn.

Whew! Finished with time to spare.

Stay well and keep living the pandemic life as best and as safely you can wherever you happen to be.
