New Guidelines for Salvage Radiation Dimensions

Here’s some information for you.

June 3, 2021 By Dan Zeller

“It has always been troubling that only about half of all salvage radiation treatments after failure of radical prostatectomy are successful. Usually, only the prostate bed is treated. But sometimes recurrent patients (or those with persistently elevated PSA) receive salvage radiation to the pelvic lymph nodes as well, or subsequently. Radiation oncologists here in the USA usually follow RTOG (now called NRG Oncology) guidelines on what constitutes the dimensions of the prostate bed and the pelvic lymph nodes.”

New guidelines for salvage radiation dimensions
