

After Polyps Are Detected, Patients May No Longer Qualify For Free Colonoscopies

Insurance coverage of colonoscopies to screen for colorectal cancer can depend on the difference between “preventive” and “surveillance” tests

February 20, 2018 By [Cancer Health Staff](#)

Insurance coverage of colonoscopies to screen for colorectal cancer is a frequent source of frustration for consumers. Here, columnist Michelle Andrews answers a reader’s question about his situation.

By Michelle Andrews

Q: When I had a screening colonoscopy in 2015, the doctor removed a polyp and told me to come back for another colonoscopy in three years. I paid nothing for the 2015 test because it was a preventive screening. When I scheduled my appointment for this year, the provider said the procedure was diagnostic because of that earlier polyp removal. Doesn’t the law protect people in these situations from being charged for more frequent but necessary screening?

Not necessarily. The Affordable Care Act greatly expanded coverage of preventive services, including requiring commercial insurers to cover screenings for colorectal cancer without charging patients anything out-of-pocket if they’re between ages 50 and 75. In general, screening colonoscopies for people at average risk are [recommended every 10 years](#) by the U.S. Preventive Services Task Force. (Under the law, preventive services are covered at no cost by insurers if they meet the task force’s recommendations.) There’s no charge to the patient for the test, even if a benign growth called a polyp [is found](#) and removed.

Doctors may recommend more frequent “surveillance” testing, as they did in your case, if during screening they find any polyps, which may put you at higher risk for colon cancer. Since the task force [doesn’t have a recommendation](#) for high-risk colorectal cancer screening, insurers aren’t required to cover it without cost sharing.

“Insurers will cover the test, but whether the patient is held harmless for the copay and deductible depends on the insurer,” said J. Leonard Lichtenfeld, MD, MCAP, deputy chief medical officer at the American Cancer Society.

Medicare also [covers screening colonoscopies](#) without charging beneficiaries anything out-of-pocket. The program covers tests every 10 years, and every two years if someone is considered high-risk. But there's a catch: In contrast to private coverage, if a polyp is found during the test, that procedure is then considered diagnostic and patients will be subject to a copayment.
